SUMMARY

Software engineer and Georgia Tech M.S. Computer Science candidate building full-stack web products, API-driven workflows, and automated tests with TypeScript, React, Python, Java, Firebase, and Playwright. Experienced in translating ambiguous requirements into deployed client prototypes and evaluating AI-generated code and technical reasoning.

EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science

University of Central Florida

Bachelor of Science in Computer Science, Minor in Mathematics

Remote

2024 – Present

Orlando, FL

2019 – 2022

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C, Solidity

Web: React, Next.js, Vite, HTML/CSS, Radix UI

Backend & Data: Node.js, Spring Boot, Firebase, REST APIs, JSON, HTTP

Testing & Tools: Playwright, Hardhat, Ethers.js, Git, Vercel, Linux

EXPERIENCE

ScribeAmerica

Sep 2024 – Sep 2025

Remote Medical Scribe

- Documented 20+ patient encounters per shift in EMR systems with 99% accuracy while protecting sensitive data and maintaining HIPAA compliance.
- Streamlined charting with approved AI-assisted dictation and reusable templates, reducing completion time by 50% in a high-volume remote environment.

Outlier AI

Aug 2024 – Dec 2024

AI Model Evaluation Specialist, STEM (Contract)

- Evaluated LLM outputs across technical tasks, identifying reasoning failures and producing detailed quality feedback.
- Designed prompts and edge cases and delivered structured labels for model-training and evaluation pipelines.

PROJECTS

Arkollab Luxury Bag Appraisal Platform | *React, Firebase, REST APIs*

2026

- Built an authenticated client appraisal workflow for image and attribute intake, asynchronous valuation, and searchable result history.
- Integrated Firebase and REST endpoints to surface live resale comparables, valuation ranges, confidence indicators, and sold-versus-active market evidence.

Koë USA & Ghost Worldwide Restaurant Prototypes | *React, TypeScript, Vite, Playwright*

2026

- Built two mobile-first restaurant prototypes: a configurable pickup/cart flow for Koë and a conversion-focused ordering-handoff site for Ghost/Chinito.
- Implemented menu filtering and modifiers, responsive device behavior, ordering/directions/catering flows, analytics hooks, structured business metadata, and Playwright coverage.

Polybay NFT Marketplace – Bachelor's Capstone | *Next.js, Solidity, Hardhat, Ethers.js, IPFS*

2021 – 2022

- Initialized the capstone codebase and authored its first ERC-721 URI-storage contract; collaborated on wallet-connected marketplace flows for IPFS-backed minting, listings, purchases, and resales.

Circle Accuracy Game | *Next.js, TypeScript, Canvas*

2025

- Developed a cross-device drawing application with real-time visual feedback and a geometric scoring algorithm based on radial consistency and closure distance.

AWARDS

President's List Award

Spring 2020

Dean's List Award

Spring & Fall 2021
